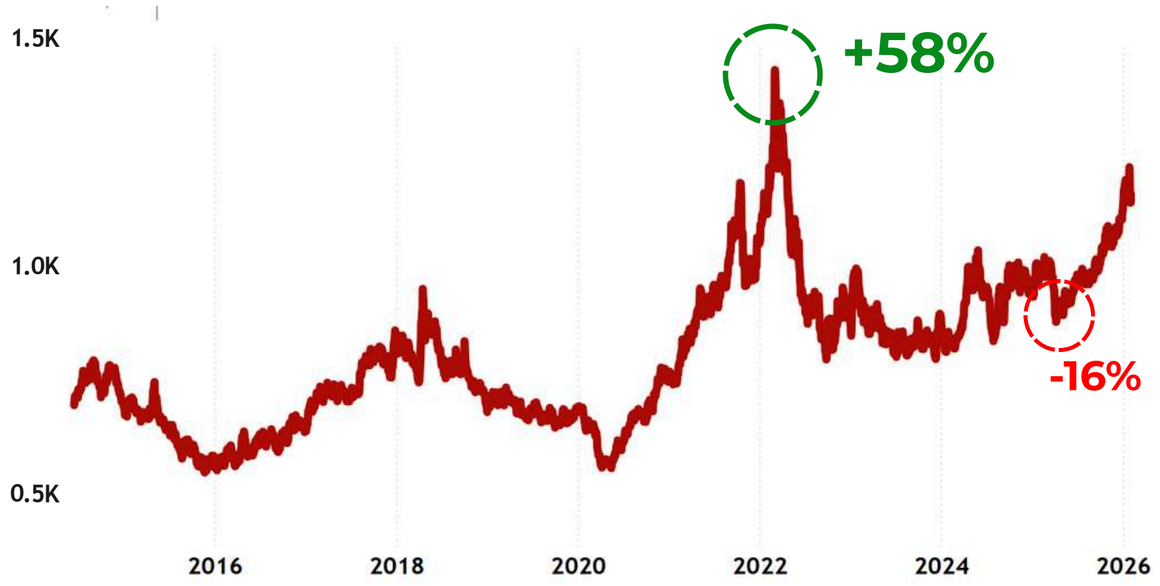
Aluminum Pricing Remains Volatile, Driven by Policy and Geopolitics

Price direction remains sensitive to China supply decisions, trade measures, and geopolitical disruptions.

CHINA OUTPUT	**China's policy and power constraints cap supply growth and keep prices sensitive to small shocks**
GEOPOLITICAL RISK RUSSIA-UKRAINE WAR	**Sanctions risk disrupted Russian metal flows, tightening availability and lifting volatility**
TRADE POLICY & TARIFFS	**Tariffs split the market into regions, widening premiums and distorting trade flows.**

LME Aluminum price (BHD/T)



Alba Price =

LME Al + Premiums + Product mix

Implication for ALBA: premiums + mix matter more when supply is capped.

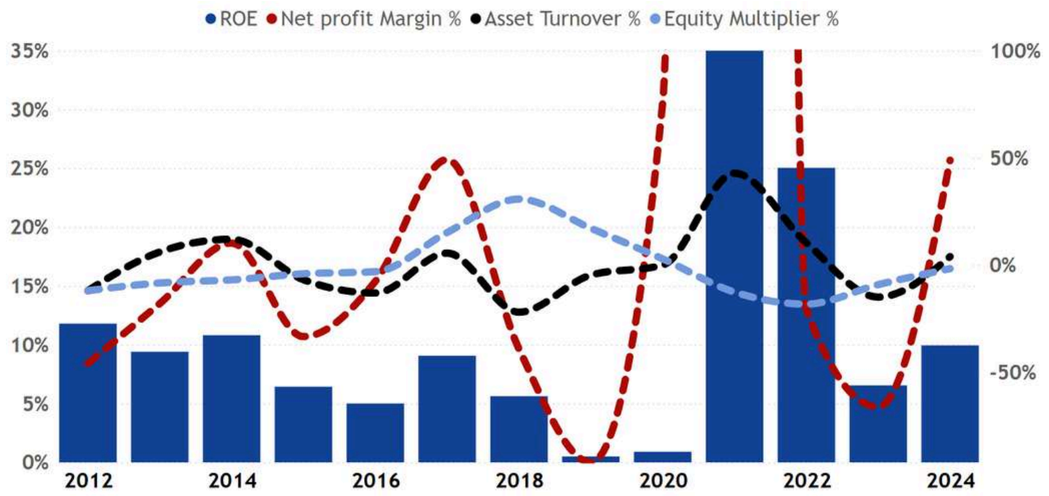
What Makes ALBA's ROE Kick, Key Driver Analysis

ROE improves as operating leverage lifts margins and asset efficiency stabilizes, reinforcing the rerating case when pricing normalizes.

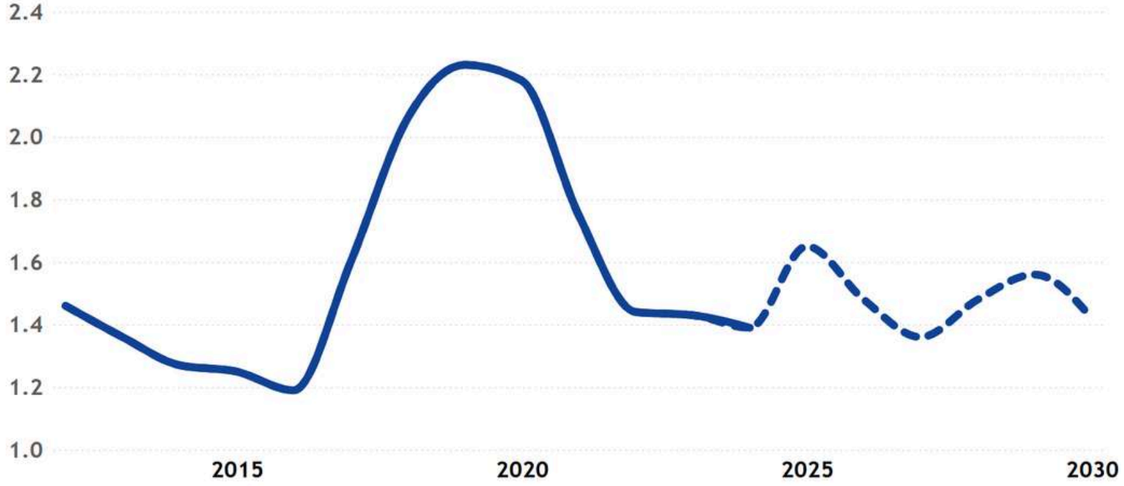
ROE and Its Drivers Highlights (2012–2024)



ROE=NPM x AT x EM

but why do we care?
This lets us dig deeper into the story of our returns to further justify on what grounds does it stand on, our net profits? revenues? leverages

Leverage ratio

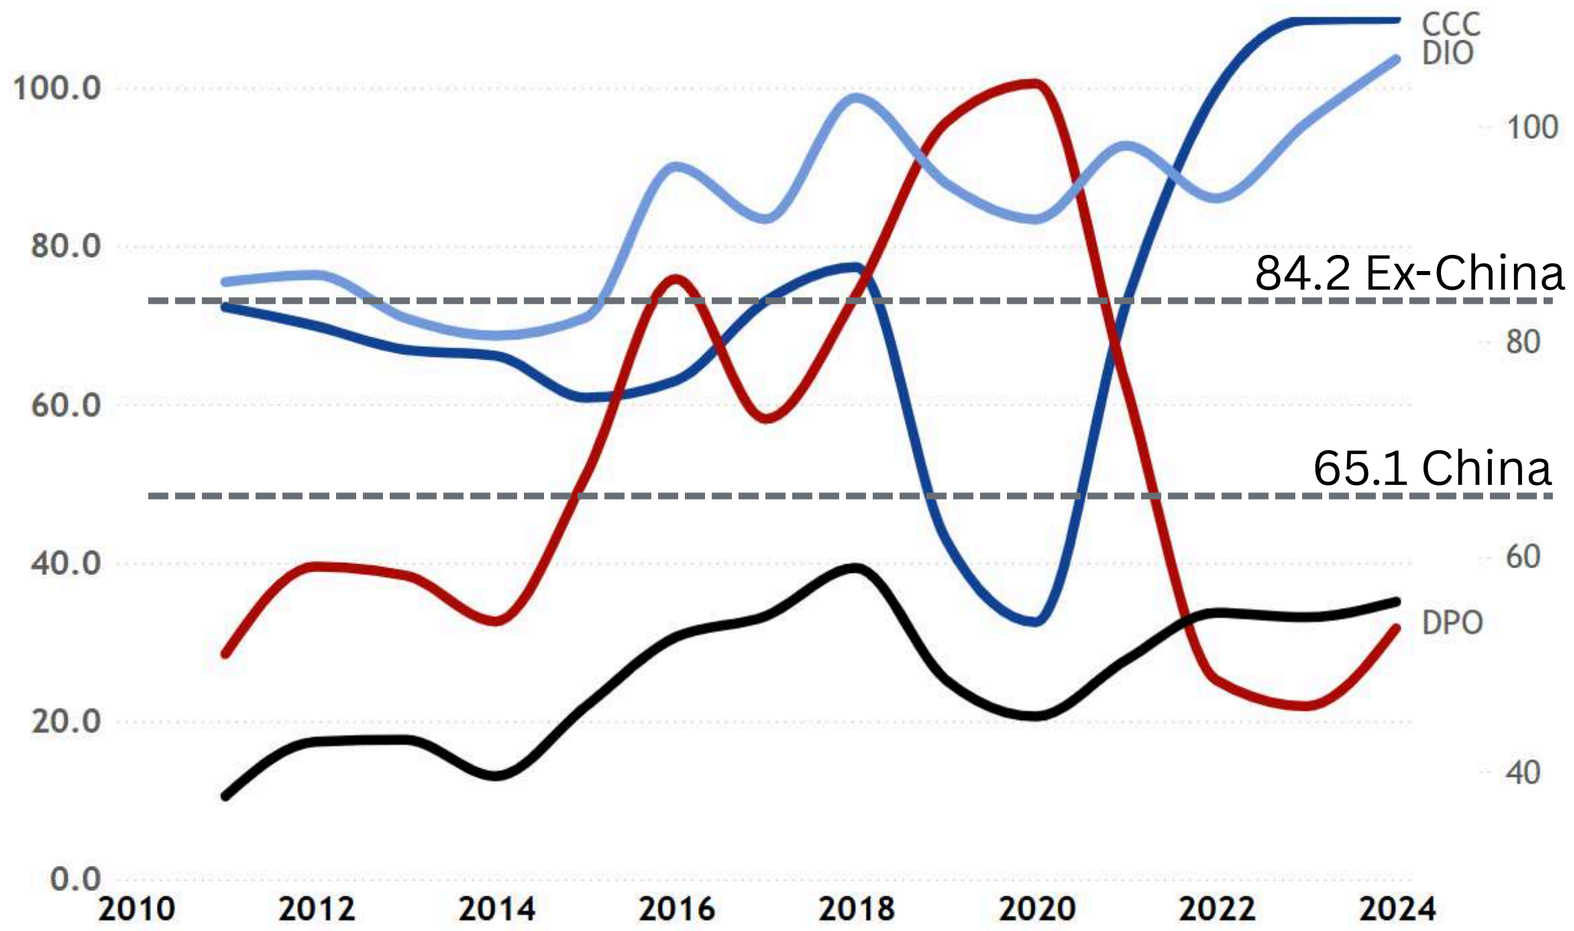


NPM is correlated with ROE at 99.99% while AT is ~78% and EM at a low ~ -25%

Source: LSEG, Company Financial Reports, Team Research

CCC Volatility Reflects Commodity Cycle Mechanics

Aluminum Bahrain's CCC expanded from 32.5 days (2020) to 108.7 days (2024), driven mainly by inventory rebuild and higher receivables in the price upcycle, not weaker discipline.



Source: LSEG, Company Financial Reports, Team Research

Downside Map: What We Watch, How ALBA Manages it

Key risks are LME price (P1) and premiums/tariffs (P2/P3), with mitigation through flexible sales/hedging, diversified alumina sourcing (C2), and secured energy supply via long-term gas + captive generation (C1).

	M1	C1	C2
	Demand & Supply of China Risk	**Energy & Gas Risk**	**Alumina Risk**
Mitigations	• Competitive cost • Monitoring China's capacity policies • Flexible production and sales strategy	• 10-year natural gas supply agreement with Bapco Energies • Power Station 5 Block 4 to improve efficiency • uninterrupted supply & operational reliability	• Long-term supply contracts (Hydro) • Multi-country sourcing (Australia, India, Saudi Arabia) • Contract renewals at competitive pricing

Valuation Overview 38.87% Upside

We set the target price at BHD 1.505 by weighting DCF (BHD 1.45) and DDM (BHD 1.55) equally, with relative valuation (BHD 1.59) as a market cross-check.

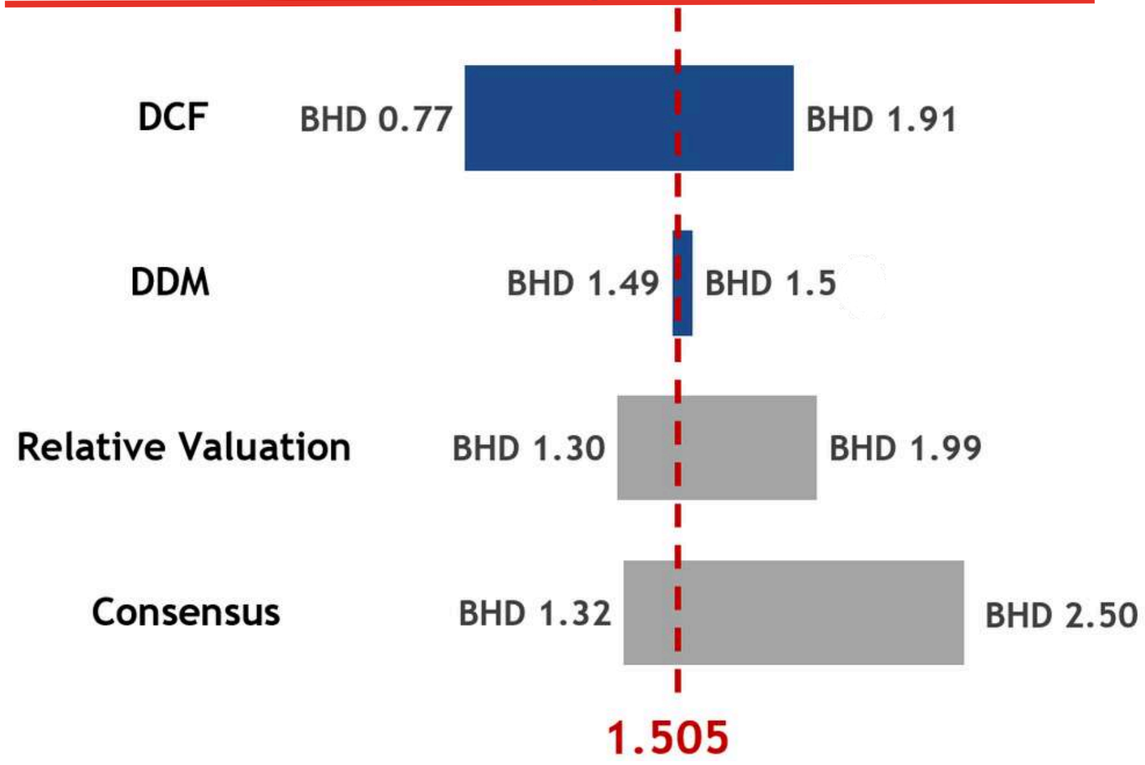
Target Price

BHD 1.505 +38.87%

Valuation Summary

50% DCF	50% DDM	Support Relative Valuation
BHD 1.45	BHD 1.55	BHD 1.59
• Reflects long-term aluminum demand outlook • Captures the cash-generating ability of ALBH	• Captures long-term dividend growth expectations • Reflects payout policy and profitability link	• Market validation of intrinsic value • Captures current market sentiment

Valuation Football field figure (BHD)



Source: LSEG, Company Financial Reports, Team Research

Discounted Cash Flows Valuation Model 33.64% upside

Our 5-year DCF model follows a properly defined assumption basis to arrive at a proper and fit understanding of ALBA's cashflows and its intrinsic value through our thesis.

DCF PRICE
1.45 BHD

Scale and VAP

Forecast production, sales via historical sell-through. 2025 production is 1,623,603 (+0.054% YoY); fade to ~flat by 2030 (no confirmed new capacity).

Balance Optimization

Cash flows stay tied to price×quantity: costs + NWC as % of revenue; stress tests flex Revenue/COGS

Energy security

Lower energy risk: captive generation + long-term gas with Bapco Energies turns to steadier unit costs; proof points: 6 MW solar + 500 MW renewable PPA tender.

History Milestones

1968

Establishment
ALBA is established as a strategic industrial project in the Kingdom of Bahrain.

1971

Start of Operations
Commercial aluminum smelting operations commence.

1990

Capacity Expansion
Progressive expansion of smelting lines positions ALBH as a major regional producer.

2005

Power & Energy Integration
Strategic focus on securing energy supply to support large-scale smelting operations.

2010

Downstream &Operational Optimization
Operational efficiencies and technology upgrades improve cost competitiveness, and the introduction of initial public offerings **(IPO).**

2015

Line 6 Expansion
Launch of Line 6, significantly increasing production capacity and making ALBH one of the world's largest aluminum smelters.

2019

ESG & Safety Focus
Increased emphasis on safety performance , environmental management and governance frameworks

2020

Decarbonization & Sustainability
Focus on : low-carbon aluminum positioning, long-term sustainability strategy , energy efficiency and emissions reduction

PROJECT PIPELINE

Project	Strategic Theme	Stage	Timing	Impact (Capacity / Cost / ESG)
Power Station 5 – Block 4	Energy & Reliability	Operating / Delivered	Completed	Enhanced power security and generation efficiency
Solar Farm (6 MW)	ESG / Renewable Energy	Operating / Delivered	Completed	Renewable power generation; CO_2 emissions reduction
e-Al Hassalah Program	Cost & Productivity	Operating / Ongoing	Ongoing	Cost savings and operational efficiency improvements
Lines 4–5 Creep-Up Project	Capacity Optimization	Approved / Under Execution	Near-term	Incremental aluminum output (+8 ktpa)
New Replacement Line (NRL)	Capacity Renewal	Feasibility / Pre-FID	Medium-term	Long-term capacity stability and asset renewal
Alba Daiki Sustainable Solutions (ADSS)	Circular Economy	Feasibility / Pre-FID	Medium-term	Recycling capability and sustainability enhancement
500 MW Renewable Energy PPA Tender	Energy Transition	Optionality / Exploration	Long-term	Decarbonisation pathway and long-term energy cost hedge
